

# Applying to Grad School & Doing Impactful Research

Onur Mutlu

[omutlu@gmail.com](mailto:omutlu@gmail.com)

<https://people.inf.ethz.ch/omutlu>

13 June 2021

Undergraduate Architecture Mentoring Workshop @ ISCA 2021

**SAFARI**

**ETH** zürich

**Carnegie Mellon**

# Intro & Research Group

# Brief Self Introduction

---

## ■ Onur Mutlu

- ❑ Full Professor @ ETH Zurich ITET (INFK), since September 2015
- ❑ Strecker Professor @ Carnegie Mellon University ECE/CS, 2009-2016, 2016-...
- ❑ PhD from UT-Austin, worked at Google, VMware, Microsoft Research, Intel, AMD
- ❑ <https://people.inf.ethz.ch/omutlu/>
- ❑ [omutlu@gmail.com](mailto:omutlu@gmail.com) (Best way to reach me)
- ❑ <https://people.inf.ethz.ch/omutlu/projects.htm>

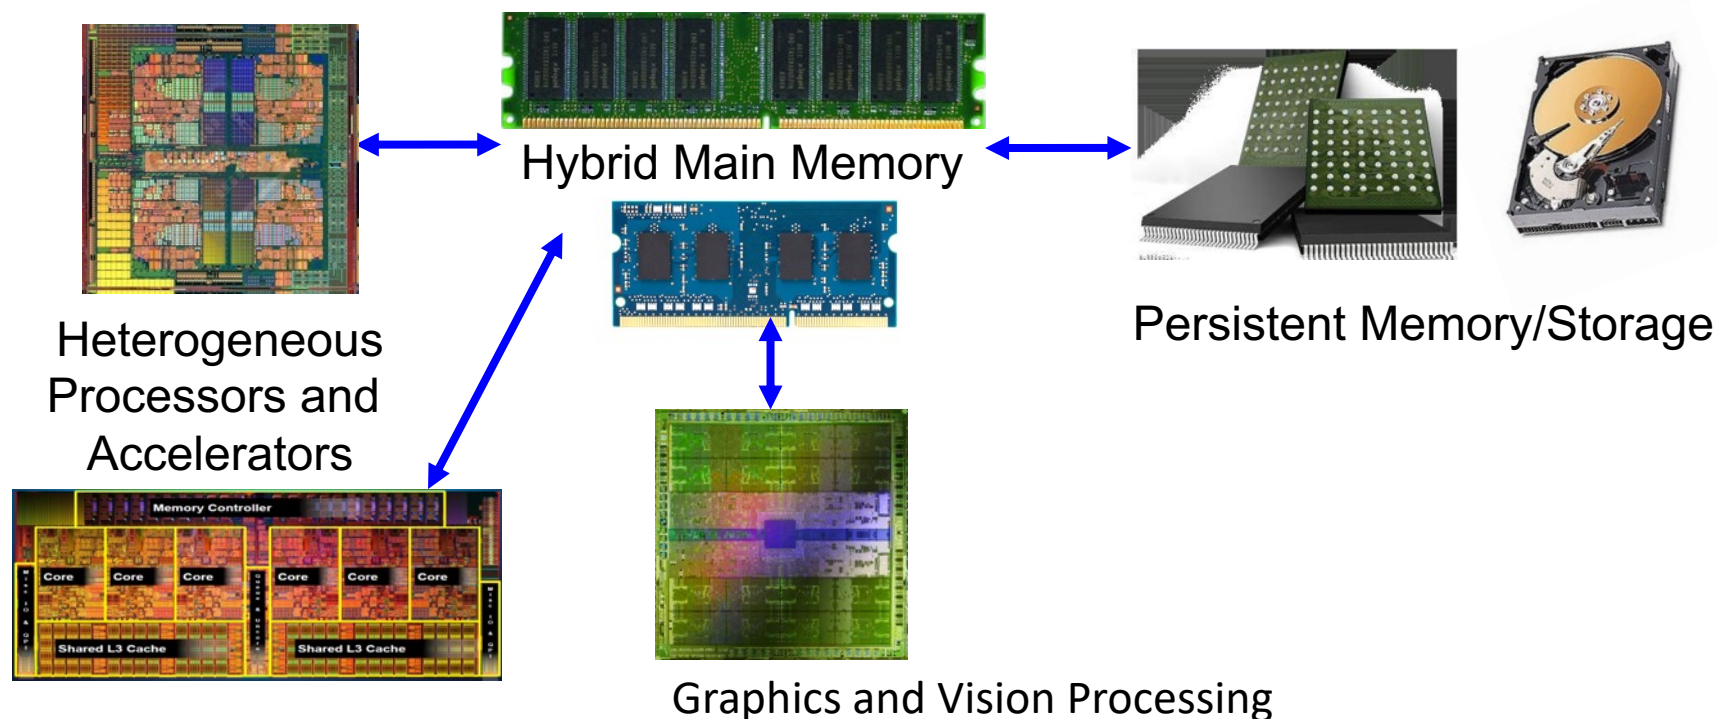

## ■ Research and Teaching in:

- ❑ Computer architecture, computer systems, hardware security, bioinformatics
- ❑ Memory and storage systems
- ❑ Hardware security, safety, predictability
- ❑ Fault tolerance
- ❑ Hardware/software cooperation
- ❑ Architectures for bioinformatics, health, medicine
- ❑ ...

# Current Research Mission

---

*Computer architecture, HW/SW, systems, bioinformatics, security*

**Build fundamentally better architectures**

# Four Key Current Directions

---

- Fundamentally **Secure/Reliable/Safe** Architectures
- Fundamentally **Energy-Efficient** Architectures
  - **Memory-centric** (Data-centric) Architectures
- Fundamentally **Low-Latency and Predictable** Architectures
- Architectures for **AI/ML, Genomics, Medicine, Health**

# The Transformation Hierarchy

---

# Axiom

---

To achieve the highest **energy efficiency** and **performance**:

**we must take the expanded view**  
of computer architecture

**Co-design across the hierarchy:**  
**Algorithms to devices**

**Specialize as much as possible**  
**within the design goals**

# Current Research Mission & Major Topics

## Build fundamentally better architectures

**Broad research  
spanning apps, systems, logic  
with architecture at the center**

- Data-centric arch. for low energy & high perf.
  - Proc. in Mem/DRAM, NVM, unified mem/storage
- Low-latency & predictable architectures
  - Low-latency, low-energy yet low-cost memory
  - QoS-aware and predictable memory systems
- Fundamentally secure/reliable/safe arch.
  - Tolerating all bit flips; patchable HW; secure mem
- Architectures for ML/AI/Genomics/Health/Med
  - Algorithm/arch./logic co-design; full heterogeneity
- Data-driven and data-aware architectures
  - ML/AI-driven architectural controllers and design
  - Expressive memory and expressive systems

# SAFARI Newsletter January 2021 Edition

- <https://safari.ethz.ch/safari-newsletter-january-2021/>

**SAFARI**  
SAFARI Research Group

Newsletter  
January 2021

*Think Big, Aim High, and  
Have a Wonderful 2021!*

Dear SAFARI friends,

Happy New Year! We are excited to share our group highlights with you in this second edition of the SAFARI newsletter (You can find the first edition from April 2020 [here](#)). 2020 has

# SAFARI PhD and Post-Doc Alumni

---

- <https://safari.ethz.ch/safari-alumni/>
- Nastaran Hajinazar (ETH Zurich)
- Gagandeep Singh (ETH Zurich)
- Amirali Boroumand (Stanford Univ)
- Jeremie Kim (ETH Zurich)
- Nandita Vijaykumar (Univ. of Toronto, Assistant Professor)
- Kevin Hsieh (Microsoft Research)
- Justin Meza (Facebook)
- Mohammed Alser (ETH Zurich)
- Yixin Luo (Google)
- Kevin Chang (Facebook)
- Rachata Ausavarungrun (KMUNTB, Assistant Professor)
- Gennady Pekhimenko (Univ. of Toronto, Assistant Professor)
- Vivek Seshadri (Microsoft Research)
- Donghyuk Lee (NVIDIA Research)
- Yoongu Kim (Google)
- Lavanya Subramanian (Intel Labs → Facebook)
  
- Samira Khan (Univ. of Virginia, Assistant Professor)
- Saugata Ghose (Univ. of Illinois, Assistant Professor)

# Principle: Teaching and Research

---

...

Teaching drives Research

Research drives Teaching

...

# Principle: Learning and Scholarship

---

Focus on  
learning and scholarship

# Principle: Insight and Ideas

---

Focus on Insight

Encourage New Ideas

# Principle: Learning and Scholarship

---

The quality of your work  
defines your impact

# Principle: Good Mindset, Goals & Focus

---

You can make a  
good impact  
on the world

# Research & Teaching: Some Overview Talks

---

## Bachelor's course

- 2<sup>nd</sup> semester at ETH Zurich
- Rigorous introduction into "How Computers Work"
- Digital Design/Logic
- Computer Architecture
- 10 FPGA Lab Assignments

## Spring 2021 Lectures/Schedule

Week	Date	Livestream	Lecture	Readings	Lab	HW
W1	25.02 Thu.	YouTube Live	L1: Introduction and Basics 02:00 (PDF) 02:00 (PPT)	Required Suggested Mentioned		
	26.02 Fri.	YouTube Live	L2a: Tradeoffs, Metrics, Mindset 02:00 (PDF) 02:00 (PPT)	Required		
			L2b: Mysteries in Computer Architecture 02:00 (PDF) 02:00 (PPT)	Required Suggested Mentioned		
W2	04.03 Thu.	YouTube Live	L3a: Mysteries in Computer Architecture II 02:00 (PDF) 02:00 (PPT)	Required Suggested Mentioned		

# Comp Arch (Fall 2020)

■ <https://safari.ethz.ch/architecture/fall2020/doku.php?id=schedule>

■ <https://www.youtube.com/watch?v=c3mPdZA-Fmc&list=PL5Q2soXY2Zi9xidyIgBxUz7xRPS-wisBN>

- Master's level course
  - ❑ Taken by Bachelor's/Masters/PhD students
  - ❑ Cutting-edge research topics + fundamentals in Computer Architecture
  - ❑ 5 Simulator-based Lab Assignments
  - ❑ Potential research exploration
  - ❑ Many research readings

## Flipping Bits in Memory Without Accessing Them: An Experimental Study of DRAM Disturbance Errors

*Abstract. Memory isolation is a key property of a reliable and secure computing system — an access to one memory address should not have unintended side effects on data stored in other addresses. However, as DRAM process technology*

## Benchmarking a New Paradigm: An Experimental Analysis of a Real Processing-in-Memory Architecture

JUAN GÓMEZ-LUNA, ETH Zürich, Switzerland

IZZAT EL HAJJ, American University of Beirut, Lebanon

IVAN FERNANDEZ, ETH Zürich, Switzerland and University of Malaga, Spain

CHRISTINA GIANNOULA, ETH Zürich, Switzerland and NTUA, Greece

GERALDO F. OLIVEIRA, ETH Zürich, Switzerland

ONUR MUTLU, ETH Zürich, Switzerland

Many modern workloads, such as neural networks, databases, and graph processing, are fundamentally memory-bound. For such workloads, the data movement between main memory and CPU cores imposes a significant overhead in terms of both latency and energy. A major reason is that this communication happens through a narrow bus with high latency and limited bandwidth, and the low data reuse in memory-bound workloads is insufficient to amortize the cost of main memory access. Fundamentally addressing this *data movement bottleneck* requires a paradigm where the memory system assumes an active role in computing by integrating processing capabilities. This paradigm is known as *processing-in-memory* (PIM).

Recent research explores different forms of PIM architectures, motivated by the emergence of new 3D-stacked memory technologies that integrate memory with a logic layer where processing elements can be easily placed. Past works evaluate these architectures in simulation or, at best, with simplified hardware prototypes. In contrast, the UPMEM company has designed and manufactured the first publicly-available real-world PIM architecture. The UPMEM PIM architecture combines traditional DRAM memory arrays with general-purpose in-order cores, called *DRAM Processing Units* (DPUs), integrated in the same chip.

This paper provides the first comprehensive analysis of the first publicly-available real-world PIM architecture. We make two key contributions. First, we conduct an experimental characterization of the UPMEM-based PIM system using microbenchmarks to assess various architecture limits such as compute throughput and memory bandwidth, yielding new insights. Second, we present *PrIM* (*Processing-In-Memory benchmarks*), a benchmark suite of 16 workloads from different application domains (e.g., dense/sparse linear algebra, databases, data analytics, graph processing, neural networks, bioinformatics, image processing), which we identify as memory-bound. We evaluate the performance and scaling characteristics of PrIM benchmarks on the UPMEM PIM architecture, and compare their performance and energy consumption to their state-of-the-art CPU and GPU counterparts. Our extensive evaluation conducted on two real UPMEM-based PIM systems with 640 and 2,556 DPUs provides new insights about suitability of different workloads to the PIM system, programming recommendations for software designers, and suggestions and hints for hardware and architecture designers of future PIM systems.

# DAMOV Methodology & Workloads

---

## DAMOV: A New Methodology and Benchmark Suite for Evaluating Data Movement Bottlenecks

GERALDO F. OLIVEIRA, ETH Zürich, Switzerland

JUAN GÓMEZ-LUNA, ETH Zürich, Switzerland

LOIS OROSA, ETH Zürich, Switzerland

SAUGATA GHOSE, University of Illinois at Urbana–Champaign, USA

NANDITA VIJAYKUMAR, University of Toronto, Canada

IVAN FERNANDEZ, University of Malaga, Spain & ETH Zürich, Switzerland

MOHAMMAD SADROSADATI, Institute for Research in Fundamental Sciences (IPM), Iran & ETH Zürich, Switzerland

ONUR MUTLU, ETH Zürich, Switzerland

Data movement between the CPU and main memory is a first-order obstacle against improving performance, scalability, and energy efficiency in modern systems. Computer systems employ a range of techniques to reduce overheads tied to data movement, spanning from traditional mechanisms (e.g., deep multi-level cache hierarchies, aggressive hardware prefetchers) to emerging techniques such as Near-Data Processing (NDP), where some computation is moved close to memory. Prior NDP works investigate the root causes of data movement bottlenecks using different profiling methodologies and tools. However, there is still a lack of understanding about the key metrics that can identify different data movement bottlenecks and their relation to traditional and emerging data movement mitigation mechanisms. Our goal is to methodically identify potential sources of data movement over a broad set of applications and to comprehensively compare traditional compute-centric data movement mitigation techniques (e.g., caching and prefetching) to more memory-centric techniques (e.g., NDP), thereby developing a rigorous understanding of the best techniques to mitigate each source of data movement.

With this goal in mind, we perform the first large-scale characterization of a wide variety of applications, across a wide range of application domains, to identify fundamental program properties that lead to data movement to/from main memory. We develop the first systematic methodology to classify applications based on the sources contributing to data movement bottlenecks. From our large-scale characterization of 77K functions across 345 applications, we select 144 functions to form the first open-source benchmark suite (DAMOV) for main memory data movement studies. We select a diverse range of functions that (1) represent different types of data movement bottlenecks, and (2) come from a wide range of application domains. Using NDP as a case study, we identify new insights about the different data movement bottlenecks and use these insights to determine the most suitable data movement mitigation mechanism for a particular application. We open-source DAMOV and the complete source code for our new characterization methodology at <https://github.com/CMU-SAFARI/DAMOV>.

# A Tutorial on Low-Latency Memory

The image shows a YouTube video player interface. The main video area displays a title slide for 'Computer Architecture' with 'Lecture 10: Low-Latency Memory' in green text. Below the title, it lists 'Prof. Onur Mutlu', 'ETH Zürich', 'Fall 2020', and '22 October 2020'. A small video inset in the top right corner shows the professor wearing headphones. The video player controls at the bottom show a progress bar at 1:29 / 2:52:13, along with icons for play, pause, volume, and other controls. Below the video player, the video title 'Computer Architecture - Lecture 10: Low-Latency Memory (ETH Zürich, Fall 2020)' is displayed, followed by '1,349 views • Oct 23, 2020'. The channel name 'Onur Mutlu Lectures' with 16.2K subscribers is shown on the left, and buttons for 'ANALYTICS' and 'EDIT VIDEO' are on the right. Engagement icons for likes (27), comments (0), share, save, and a menu are also present.

## SNP-Selective-Hiding

An optimization-based mechanism 🧠🔒 to selectively hide the minimum number of overlapping SNPs among the family members 👨👩👧👦 who participated in the genomic studies (i.e. GWAS). Our goal is to distort the dependencies among the family members in the original database for achieving better privacy without significantly degrading the data utility.

# Other Panel Questions

# Question 1: Grad Application Process

---

- *What is the grad application process at your institution?*
  - *(i.e., personal statement? standardized test scores? reference letters? interview?)*

# Application Process at ETH Zurich

---

- PhD starts after a Master's degree
  - Except for few exceptions, you need to have a Master's degree to apply
- You can apply for a Master's degree first
  - And, then go for a PhD
- Master's admissions are centralized and handled by the department (D-ITET, D-INFK, ...)
- PhD admissions are de-centralized and handled by Professor + ETH Zurich Doctoral Office

# Application Process for SAFARI

---

- <https://safari.ethz.ch/apply/>

## SAFARI Researcher Applications

Sign in

This is the application submission site to be considered for being a researcher in the [SAFARI Research Group](#), directed by [Professor Onur Mutlu](#) ([Publications and Teaching](#)).

If you are interested in doing research in the [SAFARI Research Group](#), please make sure you apply through this submissions site and supply as many of the requested documents and information as possible. Please read and follow the provided instructions and submit as complete an application as possible (given the position you are applying for).

We suggest studying the following materials before submission:

[SAFARI Publications and Courses](#)

[Onur Mutlu's Online Lectures and Course Materials](#)

Good luck!

Welcome to the SAFARI at ETH Zurich -- PhD, Postdoc, Internship, Visiting Researcher Applications (SAFARI Researcher Applications) submissions site.

# SAFARI Process

---

- An internship with the group is very useful & desirable
  - During Bachelor's, Master's degrees or at any other time
- Familiarity with the research area + passion for research
- Good personal statement
- Good critical review of papers
- Good interview with group & me
- Good mindset, goals, effort
- Good communication skills and communicativeness
- ...

# Question 2: Candidate Characteristics

---

- *What do you look for in a candidate?*
  - *What are a few things that stand out to you?*

# How to Select PhD Students & Researchers

---

- Motivation and Mindset
- Creativity
- Resilience
- Hard work
- Boldness
- Perseverance, commitment
- Intellectual strength
- Openness to feedback
- Communicativeness, emotional intelligence
- Ability to execute things until the end
- ...

A PhD is a long road. It is not for everyone. Commitment & resilience are critical.

# How to Select Students

---

- <https://safari.ethz.ch/apply/>

## SAFARI Researcher Applications

Sign in

This is the application submission site to be considered for being a researcher in the [SAFARI Research Group](#), directed by [Professor Onur Mutlu](#) ([Publications and Teaching](#)).

If you are interested in doing research in the [SAFARI Research Group](#), please make sure you apply through this submissions site and supply as many of the requested documents and information as possible. Please read and follow the provided instructions and submit as complete an application as possible (given the position you are applying for).

We suggest studying the following materials before submission:

[SAFARI Publications and Courses](#)

[Onur Mutlu's Online Lectures and Course Materials](#)

Good luck!

Welcome to the SAFARI at ETH Zurich -- PhD, Postdoc, Internship, Visiting Researcher Applications (SAFARI Researcher Applications) submissions site.

# Question 3: GPA and GRE?

---

- *When looking at applications, how important are GPA and standardized test scores (e.g., GRE) to you?*
- GPA is part of the process but not important enough
  - No decision or filtering made based on GPA
    - **We want insight not numbers**
  - Individual courses can be important
  - Motivation, characteristics, skills & insight are very important
  - GPA is not a predictor of great research
- We do not require GRE scores
- TOEFL/IELTS required for non-native English speakers

# Question 4: Personal Statement

---

- *What do you look for in a personal statement?*

# How to Select PhD Students & Researchers

---

- Motivation and Mindset
- Creativity
- Resilience
- Hard work
- Boldness
- Perseverance, commitment
- Intellectual strength
- Openness to feedback
- Communicativeness, emotional intelligence
- Ability to execute things until the end
- ...

A PhD is a long road. It is not for everyone. Commitment & resilience are critical.

# Principle: Continuous Growth

---

A PhD is About  
Continuous Growth  
(Learning &  
Independence)

# Principle: Personalized Methods

---

Find the methods  
that work for **you**

Doing so requires  
many characteristics  
(which one can learn)

# Motivation & Mindset

Start out with  
the right  
motivation and mindset

# Motivation Sets The Culture and Goals

---

- Mindset 1: change the world positively, have high influence
- Mindset 2: enable students to achieve a potential that they did not even think they could ever achieve
- Not papers
- Not fame
- Not money
- No quantitative measure, really
- ...
- Motivation correction may be needed at times – be ready

# Principle: Team of Excellence

---

Get motivated students

Build a team of  
excellence

# Principle: Learning and Scholarship

---

Focus on  
learning and scholarship

## Principle: Environment of Freedom

---

Create an environment  
that values

free exploration,  
openness, collaboration,  
hard work, creativity

# What Is The Goal of Research?

---

- To generate new insight
  - that can enable what previously did not exist
- Research is a hunt for insight that can eventually impact the world

# Principle: Insight and Ideas

---

Focus on Insight

Encourage New Ideas

# Some Basic Advice for Good Research

---

- Choose great problems to solve: Have great taste
  - Difficult
  - Important
  - High impact
- Read heavily and critically
- Think big (out of the box)
  - Do not restrain yourself to tweaks or constraints of today
  - Yet, think about adoption issues
- Aim high, be rigorous
- Write and present extremely well

Many Principles  
on the Previous Slide

Set the Bar High

# Set the Bar High

---

- The goal should be to enable students to achieve a potential that they did not even think they could ever achieve
- “Think big, aim high, enable positive change”
- Reward good, positive behavior that helps with this culture
- Recommended reading:
  - Hamming, “[You and Your Research](https://www.cs.virginia.edu/~robins/YouAndYourResearch.html),” Talk at Bell Labs, 1986.
    - <https://www.cs.virginia.edu/~robins/YouAndYourResearch.html>

# Principle: Focus on Fundamentals

---

Fundamentals  
and scholarship  
are critical  
(hypes come and go)

## Principle: Focus on Big Problems

---

**Choose Great Problems**  
**and guide your group**  
**toward them**  
**(but give them freedom)**

# Principle: Teaching and Research

---

...

Teaching drives Research

Research drives Teaching

...

# More on Teaching and Research

---

- Care about teaching immensely
- Teaching and research are two sides of the same coin → scholarship
- Both long-term and short-term is affected by teaching
- Research motivates teaching motivates research
  - I introduce RowHammer, Processing in Memory, Meltdown/Spectre, DRAM Refresh, Various Technology Scaling problems, and research examples in my Bachelor's course:
    - <https://safari.ethz.ch/digitaltechnik/spring2021/>
  - All courses can have research examples

# Principle: Focus on Communication

---

Emphasize

Clarity and Rigor  
in Communication

(critical for high impact)

Foster collaboration  
(within group)  
(across groups)  
(with companies)

# Do Everything to Have High Impact

---

- Engage with companies
- Engage and collaborate with researchers who fit your mindset
  - Collaborate, not fight
- Strive for the highest excellence

# Principle: Reach Out

---

Inspire and Reach Out

# Principle: Reach Out

---

- Give talks
- Educate others on your work and research
- Listen to everyone
  - Especially your students
- Teach, educate, collaborate

Receive & Address  
Feedback

(but do not get derailed)

# Principle: Receive & Address Feedback

---

- Address reviewer feedback
  - Take them positively
  - They can be helpful
- Feedback is not always right
  - Need to apply corrections to it
- Do not let rejection derail you – be ready for it
- Remind and encourage your students:
  - <https://www.sciencealert.com/these-8-papers-were-rejected-before-going-on-to-win-the-nobel-prize>

# Principle: Resilience

---

**Be Resilient**

# Follow Your Passion

# Principle: Passion Extended

---

**Follow Your Passion**  
**(Do not get derailed**  
**by naysayers)**

---

# Principle: Learning and Scholarship

---

The quality of your work  
defines your impact

---

Build Infrastructure to  
Enable Your Passion  
(Big Ideas & Projects)

# Principle: Work Hard

---

Work Hard to  
Enable Your Passion

# My Suggestions to You

Start out with  
the right  
motivation and mindset

Set Your Own Bar High  
(Continuous Growth &  
Learning)

# Principle: Think Big, Aim High

---

Think Big  
Aim High

Suggestion to Researchers: Principle: Passion

---

**Follow Your Passion**  
**(Do not get derailed  
by naysayers)**

---

# Principle: Build Infrastructure

---

Build Infrastructure to  
Enable Your Passion

# Principle: Work Hard

---

Work Hard to  
Enable Your Passion

Suggestion to Researchers: Principle: Resilience

---

**Be Resilient**

---

# Principle: Learning and Scholarship

---

Focus on  
learning and scholarship

# Principle: Learning and Scholarship

---

The quality of your work  
defines your impact

# Principle: Good Mindset, Goals & Focus

---

You can make a  
good impact  
on the world

# Food for Thought: Two Quotes

---

*The reasonable man adapts himself to the world;*

*The unreasonable one persists in trying to adapt the world to himself.*

*Therefore, all progress depends on the unreasonable man.*

## **George Bernard Shaw**

Progress is impossible without change,  
and those who cannot change their minds  
cannot change anything.

# Applying to Grad School & Doing Impactful Research

Onur Mutlu

13 June 2021

Undergraduate Architecture Mentoring Workshop @ ISCA 2021

**SAFARI**

**ETH** zürich

**Carnegie Mellon**

# Backup Slides on “Impactful Research”

Onur Mutlu,

**"How to Build an Impactful Research Group"**

57th Design Automation Conference Early Career  
Workshop (**DAC**), Virtual, 19 July 2020.

[[Slides \(pptx\) \(pdf\)](#)]

# Question 1: Best Practices

---

- *Which are the best practices that you would suggest to your peers as the essential one for the success of an academic team?*

# Before I Start...

---

- There is no single way of having impact.
- The following is my way, methods and principles.
- There definitely are other ways.
- The critical thing is finding the way that works well for you and your goals.
  - That you can own, cherish and optimize

# Principle: Personalized Methods

---

Find the methods  
that work for **you**

# Motivation & Mindset

Start out with  
the right  
motivation and mindset

# Motivation Sets The Culture and Goals

---

- Mindset 1: change the world positively, have high influence
- Mindset 2: enable students to achieve a potential that they did not even think they could ever achieve
- Not papers
- Not fame
- Not money
- No quantitative measure, really
- ...
- Motivation correction may be needed at times – be ready

# Principle: Team of Excellence

---

Get motivated students

Build a team of  
excellence

# Principle: Learning and Scholarship

---

Focus on  
learning and scholarship

# Some Basics of Research

Slides used in several of my courses:

e.g., [https://www.youtube.com/watch?v=M0y\\_Nvb9rGA](https://www.youtube.com/watch?v=M0y_Nvb9rGA)

# How To Do Research & Advanced Dev.

---

- We will talk a lot about this in this course
- Learning **by example**
  - Reading and evaluating strong and seminal papers & designs
- Learning **by doing**
  - Semester-long research/design projects, masters' projects, PhD thesis
- Learning **by open, critical discussions**
  - Paper reading groups, frequent brainstorming and discussions
  - Design sessions
  - Collaborations

## Principle: Environment of Freedom

---

Create an environment  
that values

free exploration,  
openness, collaboration,  
hard work, creativity

# What Is The Goal of Research?

---

- To generate new insight
  - that can enable what previously did not exist
- Research is a hunt for insight that can eventually impact the world

# Principle: Insight and Ideas

---

Focus on Insight

Encourage New Ideas

# Some Basic Advice for Good Research

defines your impact

---

# If In Doubt, See Other Doubtful Technologies

---

- A very “doubtful” emerging technology
  - for at least two decades

*Proceedings of the IEEE, Sept. 2017*

## Error Characterization, Mitigation, and Recovery in Flash-Memory-Based Solid-State Drives

*This paper reviews the most recent advances in solid-state drive (SSD) error characterization, mitigation, and data recovery techniques to improve both SSD's reliability and lifetime.*

By YU CAI, SAUGATA GHOSE, ERICH F. HARATSCH, YIXIN LUO, AND ONUR MUTLU

# Flash Memory Timeline (1967-2019)

# Flash Memory Timeline (1967-2019)

# Four Key Current Directions

---

- Fundamentally **Secure/Reliable/Safe** Architectures
- Fundamentally **Energy-Efficient** Architectures
  - **Memory-centric** (Data-centric) Architectures
- Fundamentally **Low-Latency and Predictable** Architectures
- Architectures for **AI/ML, Genomics, Medicine, Health**

# Our Dream (circa 2007)

---

- An embedded device that can perform comprehensive genome analysis in real time (within a minute)
  - Which of these DNAs does this DNA segment match with?
  - What is the likely genetic disposition of this patient to this drug?
  - . . .

# New Genome Sequencing Technologies

# Future of Genome Sequencing & Analysis

---

MinION from ONT

SmidgION from ONT

# COVID-19 Nanopore Sequencing (I)

• From ONT (<https://nanoporetech.com/covid-19/overview>)

# COVID-19 Nanopore Sequencing (II)

## How are scientists using nanopore sequencing to research COVID-19?

Samples  
are collected

**Validated SARS-CoV-2  
RT-PCR test performed**

SARS-CoV-2 positive samples

SARS-CoV-2 negative samples:  
used as negative controls

**How can this be used?**  
Genomic epidemiology: analyse variants  
& mutation rate, track spread of virus,  
identify clusters of transmission

**What are the results?**  
From RNA to full  
SARS-CoV-2 consensus  
sequence in ~7 hours

**How?**  
Targeted amplification of  
SARS-CoV-2 genome + multiplexed,  
rapid nanopore sequencing

**Targeted SARS-CoV-2  
nanopore sequencing**

**Metagenomic  
nanopore sequencing**

**How?**  
1 x RNA metagenomic  
sequencing run  
1 x DNA metagenomic  
sequencing run

**What are the results?**  
RNA: data for RNA viruses (including  
SARS-CoV-2) + microbial transcripts  
DNA: data for bacteria + DNA viruses

**How can this be used?**  
Characterise co-infecting bacteria  
& viruses, identify any correlation  
of risk factors, research potential  
future treatment implications

**SARS-CoV-2 Direct RNA whole  
genome sequencing:** assess  
viral genome in its native RNA  
form and the effect of base  
modifications

**Immune repertoire:** assess  
response of the immune system to  
SARS-CoV-2 infection by  
sequencing of full-length immune  
cell receptor genes and transcripts

**Whole human genome  
sequencing:** investigate what  
might cause different responses  
to the virus in different people  
based on their genome

**What's next?**

# Question 2: Heterogeneity & Inclusiveness

---

- *How much is important the heterogeneity of the group?  
What about the inclusion?*

# Principle: Diversity & Heterogeneity

---

- Diversity is very important
- No two people are the same -- everyone brings perspective
- Critical to be diverse, accepting, inclusive, heterogeneous
  - Age
  - Gender
  - Experience level
  - Education level
  - Geography (maybe natural in our field?)
- Critical for open, expressive culture
- Set a common goal and common culture

Create an environment  
that values

free exploration,  
openness, collaboration,  
hard work, creativity

# Question 3: Choosing Students

---

- *Which are the main characteristics and skills one should take into account when choosing PhD students and researchers for new and (possibly) impactful research groups?*

# How to Select PhD Students & Researchers

---

- Motivation and Mindset
- Creativity
- Resilience
- Hard work
- Boldness
- Perseverance, commitment
- Intellectual strength
- Openness to feedback
- Communicativeness
- Ability to execute things until the end
- ...

A PhD is a long road. It is not for everyone. Commitment & resilience are critical.

# How to Select Students

---

- <https://safari.ethz.ch/apply/>

# Question 4 and Answer: Mentoring

---

- *Can mentoring young students and managing a group be taught?*
- Answer: Yes (and, the mentoring process can be managed)
- Mentoring is a critical part of a PhD

# Question 5 and Answer: Emotional Intelligence

---

- *Emotional intelligence is considered today a key skill for managers and entrepreneurs. Do you believe that is it crucial also for research groups leaders?*
- Answer: Yes, absolutely
- Communication, understanding, mindset are all critical
  - And part of Emotional Intelligence

# Question 6 and Answer: Hierarchy

---

- *How does the group's internal hierarchy impact work effectiveness? Is a strong hierarchy implying a reduction of diversity and heterogeneity or not?*
- Answer: Less hierarchy is better. Yet, tasks of different types of students are different (postdoc vs PhD students)
- Openness and valuing of every single person and idea, regardless of level or experience
- Valuing of mentorship
  - Inexperienced folks learn from experienced ones
- Everyone collaborates
- No (artificial) barriers between people

# Food for Thought: Three Quotes

---

*The reasonable man adapts himself to the world;  
The unreasonable one persists in trying to adapt the world to  
himself.  
Therefore, all progress depends on the unreasonable man.*

Progress is impossible without change,  
and those who cannot change their minds  
cannot change anything.

**George Bernard Shaw**

**My heart is in the work.**

**Andrew Carnegie**

# In-Memory Bulk Bitwise Operations

---

- We can support in-DRAM COPY, ZERO, AND, OR, NOT, MAJ
  - At low cost
  - Using analog computation capability of DRAM
    - Idea: activating multiple rows performs computation
  - **30-74X performance and energy improvement**
    - Seshadri+, “Ambit: In-Memory Accelerator for Bulk Bitwise Operations Using Commodity DRAM Technology,” MICRO 2017.
  - New memory technologies enable even more opportunities
-

# Ambit Sounds Good, No?

---

## Review from ISCA 2016

### Paper summary

The paper proposes to extend DRAM to include bulk, bit-wise logical operations directly between rows within the DRAM.

---

### Strengths

- Very clever/novel idea.
  - Great potential speedup and efficiency gains.
- 

### Weaknesses

- Probably won't ever be built. Not practical to assume DRAM manufacturers with change DRAM in this way.
-

# Another Review

---

## Another Review from ISCA 2016

### Strengths

The proposed mechanisms effectively exploit the operation of the DRAM to perform efficient bitwise operations across entire rows of the DRAM.

---

### Weaknesses

This requires a modification to the DRAM that will only help this type of bitwise operation. It seems unlikely that something like that will be adopted.

# Yet Another Review

---

## Yet Another Review from ISCA 2016

### Weaknesses

The core novelty of Buddy RAM is almost all circuits-related (by exploiting sense amps). I do not find architectural innovation even though the circuits technique benefits architecturally by mitigating memory bandwidth and relieving cache resources within a subarray. The only related part is the new ISA support for bitwise operations at DRAM side and its induced issue on cache coherence.

# We Have a Mindset Issue...

---

- There are many other similar examples from reviews...
  - For many other papers...
- And, we are not even talking about JEDEC yet...
- How do we fix the mindset problem?
- By doing more research, education, implementation in alternative processing paradigms

**We need to work on enabling the better future...**

# Aside: A Recommended Book

---

Raj Jain, "[The Art of Computer Systems Performance Analysis](#)," Wiley, 1991.

## 10.8 DECISION MAKER'S GAMES

Even if the performance analysis is correctly done and presented, it may not be enough to persuade your audience—the decision makers—to follow your recommendations. The list shown in Box 10.2 is a compilation of reasons for rejection heard at various performance analysis presentations. You can use the list by presenting it immediately and pointing out that the reason for rejection is not new and that the analysis deserves more consideration. Also, the list is helpful in getting the competing proposals rejected!

There is no clear end of an analysis. Any analysis can be rejected simply on the grounds that the problem needs more analysis. This is the first reason listed in Box 10.2. The most common reason for rejection of an analysis and for endless debate is the workload. Since workloads are always based on the past measurements, their applicability to the current or future environment can always be questioned. Actually workload is one of the four areas of discussion that lead a performance presentation into an endless debate. These “rat holes” and their relative sizes in terms of time consumed are shown in Figure 10.26. Presenting this cartoon at the beginning of a presentation helps to avoid these areas.

FIGURE 10.26 Four issues in performance presentations that commonly lead to endless discussion.

Raj Jain, “The Art of Computer Systems Performance Analysis,” Wiley, 1991.

**Box 10.2 Reasons for Not Accepting the Results of an Analysis**

1. This needs more analysis.
2. You need a better understanding of the workload.
3. It improves performance only for long I/O's, packets, jobs, and files, and most of the I/O's, packets, jobs, and files are short.
4. It improves performance only for short I/O's, packets, jobs, and files, but who cares for the performance of short I/O's, packets, jobs, and files; its the long ones that impact the system.
5. It needs too much memory/CPU/bandwidth and memory/CPU/bandwidth isn't free.
6. It only saves us memory/CPU/bandwidth and memory/CPU/bandwidth is cheap.
7. There is no point in making the networks (similarly, CPUs/disks/...) faster; our CPUs/disks (any component other than the one being discussed) aren't fast enough to use them.
8. It improves the performance by a factor of  $x$ , but it doesn't really matter at the user level because everything else is so slow.
9. It is going to increase the complexity and cost.
10. Let us keep it simple stupid (and your idea is not stupid).
11. It is not simple. (Simplicity is in the eyes of the beholder.)
12. It requires too much state.
13. Nobody has ever done that before. (You have a new idea.)
14. It is not going to raise the price of our stock by even an eighth. (Nothing ever does, except rumors.)
15. This will violate the IEEE, ANSI, CCITT, or ISO standard.
16. It may violate some future standard.
17. The standard says nothing about this and so it must not be important.
18. Our competitors don't do it. If it was a good idea, they would have done it.
19. Our competition does it this way and you don't make money by copying others.
20. It will introduce randomness into the system and make debugging difficult.
21. It is too deterministic; it may lead the system into a cycle.
22. It's not interoperable.
23. This impacts hardware.
24. That's beyond today's technology.
25. It is not self-stabilizing.
26. Why change—it's working OK.

Raj Jain, "The Art of Computer Systems Performance Analysis," Wiley, 1991.

# Suggestions to Reviewers

---

- Be fair; you do not know it all
- Be open-minded; you do not know it all
- Be accepting of diverse research methods: there is no single way of doing research
- Be constructive, not destructive
- Do not have double standards...

**Do not block or delay scientific progress for non-reasons**

# Missing the Point **Reviews from Micro 2013**

## **PAPER WEAKNESSES**

This is an excellent test methodology paper, but there is no micro-architectural or architectural content.

## **PAPER WEAKNESSES**

- Whereas they show disturbance may happen in DRAM array, authors don't show it can be an issue in realistic DRAM usage scenario
- Lacks architectural/microarchitectural impact on the DRAM disturbance analysis

## **PAPER WEAKNESSES**

The mechanism investigated by the authors is one of many well known disturb mechanisms. The paper does not discuss the root causes to sufficient depth and the importance of this mechanism compared to others. Overall the length of the sections restating known information is much too long in relation to new work.

# Dismissing Science

## Reviews from ISCA 2014

### PAPER WEAKNESSES

1) The disturbance error (a.k.a coupling or cross-talk noise induced error) is a known problem to the DRAM circuit community.

2) What you demonstrated in this paper is so called DRAM row hammering issue - you can even find a Youtube video showing this! - <http://www.youtube.com/watch?v=i3-gQSnBcdo>

2) The architectural contribution of this study is too insignificant.

### PAPER WEAKNESSES

- Row Hammering appears to be well-known, and solutions have already been proposed by industry to address the issue.

- The paper only provides a qualitative analysis of solutions to the problem. A more robust evaluation is really needed to know whether the proposed solution is necessary.

# We Need to Fix the Reviewer Accountability Problem

**Eliminate**  
**Double Standards**

# Another Recommended Book

---

# Computer Architecture Today

---

- You can revolutionize the way computers are built, if you understand both the hardware and the software (and change each accordingly)
- You can invent new paradigms for computation, communication, and storage
- Recommended book: Thomas Kuhn, “[The Structure of Scientific Revolutions](#)” (1962)
  - ❑ Pre-paradigm science: no clear consensus in the field
  - ❑ Normal science: dominant theory used to explain/improve things (business as usual); exceptions considered anomalies
  - ❑ Revolutionary science: underlying assumptions re-examined

Suggestion to Researchers: Principle: Passion
